Hex Key with Ball End

Item no. 23800

This high-quality angled hex key (also known as an Allen key) is specially designed for internal hex screws. The extra-large contact surfaces in the screw head significantly reduce notching, protecting the screws and preventing damage to the edges.

The ball end on the long arm allows you to tighten and loosen screws even at an angle — ideal for working in tight or hard-to-reach spaces.

The BlackLaser coating provides reliable corrosion protection and ensures a long service life.

Compatible with MicroFix bossheads 2380 and 2381, 2385 and 2386.
